Dept. of Information Technology,

Bhavna Trust Junior And Degree College Of Science And Commerce Deonar Mumbai

ABSTRACT

Education is very important in every individuals life. If one is educated they will know what is right and what is wrong and can take a proper decision in any circumstances ICT means education communication and technology

Keywords: Education, ICT

I. INTRODUCTION

Our country is developing rapidly in the field of ICT (information communication and technology). This is because people are educated. Education is like wealth. If one is educated they can use their knowledge in various fields like arts, science, commerce, agriculture, medical science, technology etc.

Technology has developed rapidly to such an extent that it is possible to access internet even in remote areas. Brilliant Students living in remote (village) areas find it difficult to go to city or other country for higher education especially when they have financial issues, health issues or family issues.

II. MOBILE NETWORK

Most of the people living in remote area are aware of education and technology. Nowadays both educated and uneducated people have a smart phone. They can easily access the network for any information from any part of the world by using the tip of their finger.

III. CONCLUSION

Information of the student who is in remote area should be saved in the data base along with the biometric, palmprint and photo. When the student enrolls for a university abroad online, after verification of his data a registration number (login id, password and time) is given to the student and his college time is given. The student has to login at the particular time allotted. A virtual class room is created where the student can see the teacher and other students who have logged in. The teacher can give lecture, show presentation or interact with students or students can interact with other students. Once the completion of the degree the student can give the exam in the virtual class room. After online verification the abroad university can give the student the degree certificate which should be valid in any part of the country.
