*2 Assi. Prof. Yash Dasani, Civil Engineering Department, DRVRGCET, Gujarat, India.*

## ABSTRACT

Vertical forest structure is an attribute of forests that is of interest to many discussed in the context of ecosystem management. The vertical forest stratification of tree crowns is a forest attribute that influences both tree growth and understory community structure accumulation of nitrous oxides today air pollution is responsible for many health problem in the urban areas due to air pollution problem not only humans but animals and birds were also suffering from this problem in Porbandar city hairs cinema in five floor building in construction in grow in four floor 10,000 plants.

**Key words:** Vertical forest, Heat wave deaths, Green building.

### 1. Vertical forest:-

Vertical forest is a model for a sustainable residential building, a project for metropolitan reforestation contributing to the regeneration of the environment and urban biodiversity without the implication of expanding the city. Upon the territory it is a model of vertical densification of nature within the city that operator in relation to policies for reforestation and naturalization of large urban and metropolitan borders, global warming became a major threat that pose a nightmare to all countries of the world though several reasons persist it does not refer to the slow rise in the global mean temperature but a drastic cause a destructive impact on a mass scale dissolved oxygen is necessary to many forms of life. Including fish invertebrates, bacteria and plants these organisms use oxygen in respiration, similar to organisms obtain oxygen for respiration through their gills. While plant life and phytoplankton respiration when there is no light for photosynthesis the amount of dissolved oxygen needed varies from creature to creature bottom feeders, crabs oysters and worms need minimal amounts of oxygen (1-6MG/ L) while shallow water fish need higher levels (4-15MG/L) microbes such as bacteria and fungi also require dissolved oxygen these organisms use do to decompose organic material at the bottom of a body of water microbial decomposition is an important contributor to is an nutrient recycling however there is an excess of decaying organic material light can penetrate water though the depth that it can reach varies due to dissolved solids and other light scattering element present in the water depth the wavelengths available to plant with red being absorbed quickly and blue light being visible past 100 m in clear water available to plants no longer enough light for photosynthesis to occur beyond 200m and aquatic plants no longer grow in turbid water this photonic zone is often much shallower regardless of wavelengths available the cycle dose not change

$Co_2 + H_2O = (CH_2O) + O_2$

#### 1.1 Design of vertical forest :

The sudden rise in global temperature stimulates the occurrence of arrogant climatic factor in the form of India. Rose from 1 to 2 degree life styles in Indian metropolitan cities have migrated from separate homes into residential in under to counter the dense population this result in cutting of tree deforestation thereby is making the ecosystem to become more unproductive to live allowing project like eco-city the basic idea behind vertical foresting is giving back to nature which made the world wide architects to renovate the art of farming even

**1.2 Design of building :**

Design in building five floor under ground provided in parking area one floor grow in plan to last floor grow in plants lady palm, king of hearts ,silver queen or Chinese ever green, aloe vera ,tulsi ,chrismas cactus , gerbera,neem tree areca palm , synonym , English hedger helix ,bamboo palm ,money plant .building ground level in side garden people in public place .

**2.Photos of plants :**

**King Of Hearts**

**Dumb cane**

**Silver Queen**

**Aloe vera**

### 3 location of Harish cinema in Porbandar City

**4. CONCLUSIONS :**

Because of this project the level of I express my cavernous sense of obligation and gratitude to my guide Ass .Prof Yash Dasani and Dr.Sanjay Agal for this genuine and consent encouragement throughout this project work . I am highly obliged as my honorable guide for providing me such an opportunity to carry out research under continuous guidance co2 is decrease compare to past level co2 The development of porbandar city is increase in a futurewe developed maximum vertical forest and reduce co2 level clean environment .

**5. ACKNOWLEDGEME :**

I extend my sincere thanks to Ass Prof . Yash Dasani and Dr. Sanjay Agal have devoted his valuable time and shared his expertise knowledge .

I also wish to express my heartfelt appreciation to colleagues and many who have their support for the successful works towards the completion of the research both and implicitly.
