1. INTRODUCTION

There is a need to replace the traditional method of buying and reading newspaper with daily mirror. Daily mirror makes available every piece of information and worldwide happenings at your happening at your fingertips. Daily mirror is an effective and cost-efficient way to gain knowledge eventually it's a platform to comment their views on a particular topic gradually emphasizing on the idea of public awareness.

Daily mirror is a platform for marketers to promote their goods to common people at low brokerages. This project is an effective way to reduce the use of paper used for preparing newspaper which is a good initiative towards green earth. Daily mirror is platform independent as well as it meets the requirements of new generation.

2. LITERATURE REVIEW AND OBJECTIVE

- An Online newspaper was created by Bruce Parrello in 1974 on the PLATO system at the university of Illinois.
- Beginning in 1987, the Brazilian newspaper Jornaldodia ran on the state-owned Embratel network.
- By the late 1990s, hundreds of U.S. newspapers were publishing online versions but they did not offer much interactivity.
- In April 2001, American trade journal Editor & Publisher Interactive had registered in its database 12,878 news media online.
- The entire Western world, largely due to a simpler "point-and-click" interface for the World Wide 284 Web.
- In October 2020, 11 online only news portals formed DIGIPUB News India foundation to encourage an ecosystem of Digital Only press.

3. MATERIAL AND METHODS

The news portal project can be divided into mainly two modules:1. Admin module 2. User module
1.Admin module:
The admin module of a news portal is a section that is accessible only to the authorized personnel, usually the website administrators, editors, and moderators. It provides a set of tools and features that allow them to manage the content, users, and settings of the news portal. Here are some of the common features and functions of an admin module of a news portal:

1. Content management: The admin module allows editors to add, edit, and delete news articles, images, videos, and other types of content.
2. User management: The admin module allows administrators to manage user accounts, permissions, and access levels. They can also ban or suspend users who violate the website's terms of service.
3. Analytics: The admin module provides statistics and analytics related to website traffic, user behavior, and content performance. This information can help editors and administrators to make informed decisions about content strategy, advertising, and user engagement.
4. Advertising management: The admin module allows administrators to manage advertising campaigns and display ads on the website. They can also track the performance of ads and revenue generated from them.
5. Security: The admin module provides tools for managing website security, including user authentication, access control, and backup and recovery.
6. Settings: The admin module allows administrators to manage website settings, such as site name, URL, logo, favicon, and other configurations.
7. Feedback management: The admin module allows administrators to manage user feedback, including comments, ratings, and reviews. They can moderate the feedback and take appropriate action in case of spam or abusive content.

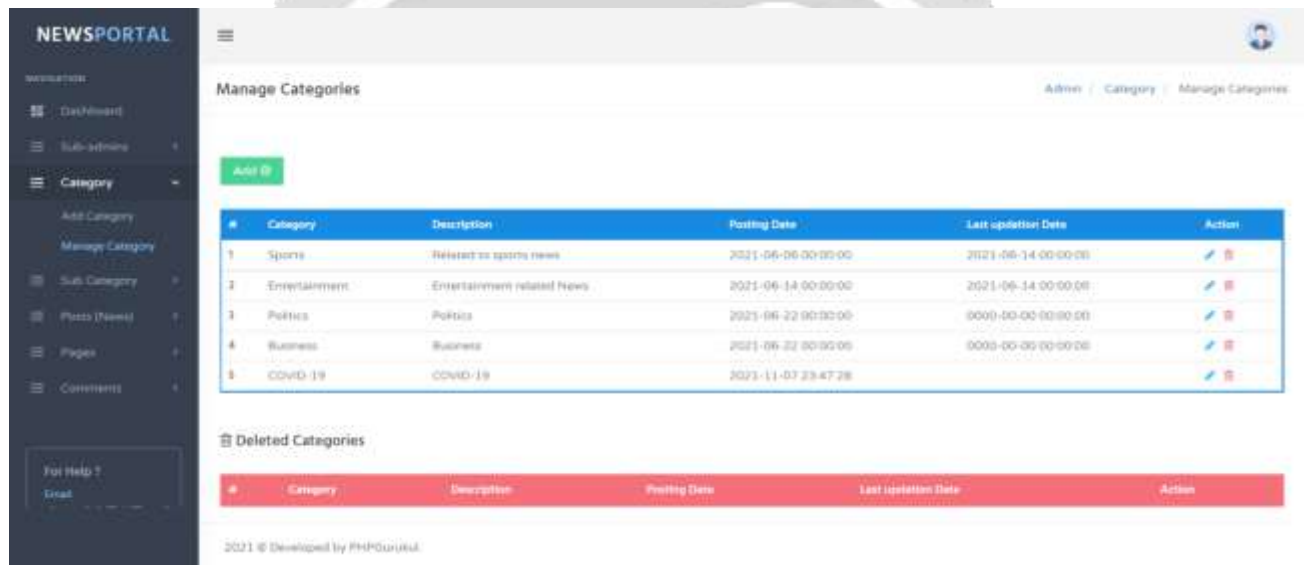

Figure [1]: Admin Module

Overall, the admin module of a news portal is crucial for maintaining the quality, security, and performance of the website, and ensuring a positive user experience for visitors.

2.User module:

The user module of a news portal refers to the section of the website that is accessible to the visitors or registered users. This module provides a range of features and functions that allow users to read, share, and interact with the content published on the website. Here are some of the common features of the user module of a news portal:

1. Registration and login: The user module allow visitors to create an account and login to the website. This allows them to access additional features and personalized content.
2. Reading news articles: Users can browse and read news articles from various categories, including the latest news, breaking news, features, and opinion pieces.
3. Search: The user module allows users to search for news articles based on keywords, categories, or authors.
4. Commenting: Users can leave comments on news articles and share their opinions or feedback with other users.
5. Sharing: Users can share news articles on social media platforms or through email.

6. Subscription: The user module allows users to subscribe to newsletters or push notifications to receive updates on the latest news and articles.
7. User profile: Users can create and manage their profiles, including their personal information, preferences, and saved articles.
8. Feedback: The user module allows users to provide feedback to the website administrators, such as reporting errors or suggesting improvements.

Figure [2]: User Module

Overall, the user module of a news portal plays a vital role in engaging users and providing them with a seamless experience while browsing and interacting with the content.

4. CONCLUSIONS

By using this project, the users get instant and latest news from all over the world. As we know that, to make a paper we need to cut trees which affects directly to the environment. Our "Daily Mirror" project will reduce the use of paper which is used for preparing newspaper which is a good initiative towards our green earth.

Each individual can get latest and updated news about sports, business and agriculture. As this device is platform independent, users can access it on any software which they have.

Nowadays, there is a need to keep users in touch with the day-to-day news and that requirement is fulfilled by our project.

5. ACKNOWLEDGEMENT

work successfully.

And lastly, we thanks to all our friends and the people who are directly or indirectly related to our project work.
