### **ABSTRACT**

Today right now 21st century each assignment have been made snappier because of progression in innovation, however this headway requests high starting speculation. These days advertise is serious and to make due right now, machine devices are required which can improve the profitability rate keeping up the quality and standard of the item easily. Accordingly we have built up an applied model which is a specific reason machine which can perform various tasks. This machine instrument will have the option to perform different activities like DRILLING, CUTTING AND SHAPING. All perceptions will be performed utilizing single force source.

Keyword DRILLING, CUTTING AND SHAPING etc....

# INTRODUCTION

This Project manage structure, advancement and creation of "MULTI PURPOSE MECHANICAL MACHINE". This machine is intended with the end goal of MULTI-OPERATION for example DRILLING, CUTTING AND SHAPING. This machine perform multipurpose activity at same time with required speed and this machine is programmed which is controlled and worked by a solitary engine which is run with the assistance of current. This machine depends on the instrument of whitsworth returns. This model of the multi OPERATIONAL machine is might be utilized in ventures and residential OPERATION which can perform mechanical activity like boring, cutting and molding of a slim mettalic just as wooden model or body.

## 1.1 Problem Statement

To plan and advancement of MULTI PURPOSE MECHANICAL MACHINE an organized which is intended with the end goal of MULTI-OPERATION for DRILLING, CUTTING AND SHAPING.

# 1.2 **Problem Identification**

This machine perform multipurpose activity at same time with required speed and this machine is programmed which is controlled and worked by engine which is run with the assistance of current. This machine depends on the system of whitsworth returns. This model of the multi OPERATIONAL machine is might be utilized in enterprises and residential OPERATION which can perform mechanical activity like boring, cutting and forming of a meager mettalic just as wooden model or body.

### 1.3 NEED OF DEVELOPMENT OF MACHINE

Right now are electrically determined. Consequently, we thought of a thought in regards to multipurpose machine which could perform the two tasks, for example, interior and outside granulating and with that we included drill with assistance of a slope gear, this could really chip away at a solitary force source with no accelerating movement as accelerating isn't extremely effective procedure right now quickly developing business sector.

# 2. CONCLUSIONS

The procedures and applied model expressed in writing audit, for example, running the multi-reason machine with assistance of power produced by accelerating work with exertion of human was not extremely effective and was inapplicable right now. Therefore, we created and adjusted the model dependent on the writing audit and thought of a superior thought of utilization of multi-reason machine tasks with single force source.
